Hi Tanner,

I am writing to express my interest in the Senior Software Engineer position for SDKs at Prismatic. I have a variety of experience working with Typescript, building both public APIs, and integrations with other software platforms. I am very excited about the opportunity to contribute to your team. The role's emphasis on DX and crafting strong SDKs is intriguing.

As a Senior Software Engineer on the founding team at Stashpad, I designed and maintained a public API for interacting with our docs platform. Additionally, I built a Slack integration which our customers use to quickly jump into a shared doc during a meeting. During previous roles, I have also been responsible for developing a HubSpot integration, and building and maintaining a React component library.

I believe that I can be a strong contributor to the Prismatic SDK team, not only through code, but also by mentoring others. In both my current and previous role I have directly mentored other developers, and helped with the interviewing and hiring process. I take pride in thorough code reviews, and really enjoy pairing with other teammates to solve problems together.

I am searching for a role in the developer tooling space at a company that is scaling up, and Prismatic sounds like a great fit. It is exciting to hear that you are using Bun to build and test your existing SDKs and libraries. I have kept up with Bun over the past two years or so, and am using it to build the frontend of a language compiler I'm working on in my spare time.

Thank you for considering my application. I look forward to learning more about Prismatic as a company, and how I can help Prismatic scale up to the next level.
